

RECYCLE 5

Ipswich welcomes **GLASS** back to the recycling bin.

[Ipswich.qld.gov.au/recycling](https://www.ipswich.qld.gov.au/recycling)

Ipswich City Council has a brand new **Resource Recovery Strategy** which will change the way we handle waste and resource recovery within our city.

This new strategy is centred on four key pillars

PILLAR 1

Food Organics Garden Organics (FOGO)

One of the easiest ways to help reduce landfill is to divert food and garden material from the red lid waste bin into a specialised green lid FOGO bin. So, in 2023-2024 council will move to make this a core service for Ipswich residents.

PILLAR 2

Optimise yellow bin recycling

To minimise the loss of valuable recycling to landfill, council has reintroduced glass back into the yellow lid recycle bin and will also provide larger 360L bins to households with greater recycling needs.

PILLAR 3

Large item kerbside collection

Whilst council will hold its free biennial large kerbside collection service later this year, this service will evolve into a flexible on-demand service providing greater convenience for our residents. This new on-demand service will also include sorting and recycling of material collected.

PILLAR 4

Council Recycling and Refuse Infrastructure

To manage the city's significant population growth, improvements are being made to existing waste and resource recovery facilities with a new Recycling and Refuse Centre planned for 2024-2025.
